come to church on

Easter Sunday

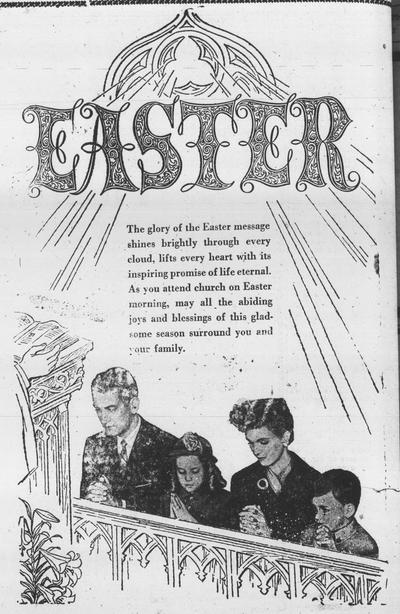
Easter is one of the major Seasons and Events of the year. Its religious significance is so tremendous that it should and must overshadow the concept that it is "just another holiday." It is our inheritance that we can work and live and strive for the "good life" in the firm belief and knowledge of immortality, because Easter is our proof.

Indeed, over most of the world, Easter has come to stand for New Life, New Hope and New Inspiration. The glorious Season of Spring shows us so dramatically that from the Death of Winter there comes the New Life of Spring.

We take this occasion to urge you to attend the Church of your choice this Easter Sunday. Many special services are being held. Attend Church with joy and reverence. We are proud that in America we can worship in freedom and true faith. Our Churches and our Faith are a bulwark of Civilization. Keep them strong. Do not neglect the Things of the Spirit and Soul. Make your Church attendance on Easter a family event.

As Appomattox business places, we are happy to Commend our Local Churches.

We wish you a Happy Easter Season.



The glory of the Easter message shines brightly through every cloud, lifts every heart with its inspiring promise of life eternal. As you attend church on Easter morning, may all the abiding joys and blessings of this glad-some season surround you and your family.

COUNTY AGENT EXPLAINS FERTILIZING OF CORN

Farmers in Appomattox County can reduce stands of corn by applying too much fertilizer in the row states Jim Smith, County agent.

Nitrogen and potash are the two main plant plant nutrient that injure corn germination. Phosphate is the "energyy" plant food that helps to start young seedlings or plants.

Many farmers apply part of the fertilizer in the row with corn and then broadcast the rest either before plowing or disking into the seedbed. When fertilizer is placed in the row, it should not come in contact with the corn kernels. As a general rule, do not apply over 100 to 150 lbs. of a 5-10-10 or 200 to 300lbs. of a 5-10-10, 5-20-10 or 5-10-5 or equivalent fertilizer in row with kernels. Fertilizer banded two inches to the side and two inches below the kernels gave little injury. Broadcast the rest on the land and sidedress with nitrogen if needed.

Research by the agronomy department at Virginia Polytechnic Institute shows that row application injury is much greater during an unfavorable season than during a good season. Where heavy rates of fertilizer were applied in the row with the kernels, the stands and yield was reduced. This injury ran from 20% to90% depending on the season. If a row application is used, apply a small amount in the row and broadcast the rest.

On soils with fairly good fertility all the fertilizer for corn may be broadcast with good results. In fact, the yields are just as good as where part is in the row and the rest broadcast. On lighter soils additional nitrogen will be needed as a sidedressing.

Farmers are urged not to reduce corn stands by fertilizer injury in the row. Either apply a small amount in the row and broadcast the rest or broadcast all of the fertilizer. Reduced stands means less corn to harvest next fall.
